                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 TISSUE SPECIFICITY: Highly expressed in spleen and testis; detected at lower levels in lung and thymus. DISEASE: Defects in Thirsfils are a cause of severe B-cell deficiency. B-cell deficient strain A/WySnJ has a 4.7 kb if in the BAFFR gene leading to an altered C-terminus. The mut is not detectable. B-cell lymphopoiesis is normal, but the span of peripheral B-cells is much reduced.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 FUNCTION: B-cell receptor specific for TNFSF13B/TALL1/BAFF/BLyS. Promotes the survival of mature B-cells and the B-cell response. SUBCELLULAR LOCATION: Membrane; single-pass type III membrane protein (Probable).
